GUIDE WOODSAFE® PRO™ FIRE-RETARDANT TREATED WOOD

Version:
20230110-V1

CPR, CE certificate:
0402-CPR-SC0243-09
Type approval certificate:
TG 0263-08

Woodsafe Timber Protection AB. Telephone | +46 (0) 10 206 72 30 | kundtjanst@woodsafepro.com | www.woodsafepro.com

PRODUCT FACTS

WOODSAFE® PRO™ fire-retardant treated wood is a processed wood that, through vacuum pressure impregnation, shows improved fire performance on all six sides of the material. The fire retardant deeply penetrates the wood and becomes fixed in the wood's cells, which does not affect the feel or structure and is not affected by natural movements. Woodsafe Timber Protection AB is an industrial manufacturer holding a Type Approval Certificate and CE certificate in accordance with the Construction Products Regulation (CPR305/2011, EN14915), Quality and Management System ISO 9001, Environmental Management System ISO 14001 and Continuous Production Control by RISE (No. Body: 0402).

ENVIRONMENTAL MANAGEMENT SYSTEM

Manufactured according to: ISO 14001:2015 | 5829M

WASTE CODE

Wood waste 170201

ASSOCIATED DOCUMENTS

More associated and related documents

HEALTH

Wood impregnated with Woodsafe PRO is not classified as harmful to health or the environment under the REACH regulation (1907/2006) limit value for chemical content.

SORTING

Woodsafe PRO is sorted as ordinary wood under waste code 170201. Woodsafe PRO does not contain copper substances similar to NTR impregnated wood.

CIRCULAR

Woodsafe PRO impregnated wood material can be reused for other suitable purposes, but not as animal bedding or biofuel. EPD is available at woodsafepro.com

SUSTAINABLE

See Woodsafe's sustainability report.

Woodsafe support department

We know that fire retardant wood and all the instructions, rules, fire safety requirements, etc. can seem difficult and complicated. That's why the Woodsafe support department is always there for you. You can reach us on +46 10 206 72 30 or support@woodsafepro.com - We'll help you!

Woodsafe-treated wood is not subject to a permit, labelling or other restrictions as a finished product. However, the wood processing process means that >0.3% by weight of any substance (boron compounds) is included in the latest version of the Candidate List of REACH (EC 1907/2006) published by ECHA (European Chemicals Agency) on 24 June 2013.

Duty to provide information to downstream users

The reason for this information is that Woodsafe Timber Protection is subject to a duty to provide information under REACH for goods and products with a content greater than 0.3% by weight in accordance with Regulation 1272/2008.

Construction waste management

Woodsafe PRO impregnated wood is not classified as dangerous goods or NTR classified wood. Sorting is carried out as normal wood in municipal recycling or recovery stations at heating plants.

| Waste code | 170201 | EWC code | WOOD  |
| Hazardous waste | No | | |
| ADR/Dangerous Goods | No | | |
| NTR A, AB | No | | |
| Recycling material | Yes | | |
| Disposal material | Yes/No | | |

Recycle – Use

Woodsafe PRO can be reused for other purposes where ordinary wood is generally used according to D-s2,d0. For uses requiring higher fire performance, this must be controlled from its original use.

Recycling – downstream processing

Woodsafe PRO must not be processed downstream as animal bedding or biofuel.

Recycling – energy recovery

Woodsafe PRO may only be incinerated in municipal heating installations mixed with untreated wood.
